

Ishan Saxena

Software Engineer | Full-Stack & Android Development

06ishansaxena@gmail.com | +91-9205243543 | [LinkedIn](#) | [GitHub](#)

Technical Skills

Programming Languages	C++, Java, JavaScript (ES6+), Kotlin, Python, HTML, CSS
Frameworks and Libraries	Node.js, React.js, Next.js, Jetpack Compose, Android SDK
Databases	MongoDB (NoSQL), Firebase, MySQL
Developer Tools	AWS (Cloud), Git, Docker, Postman, Figma, VS Code, Android Studio
Core Competencies	Backend Development, Distributed Systems, REST Architecture, API Design, Test Automation, Microservices, Relational Schema Design, CI/CD Pipelines
Other Skills	Design Thinking, Prompt Engineering, LaTeX

Education

B.Tech: Computer Science and Engineering Vellore Institute of Technology, Bhopal (CGPA: 8.84)	Sept 2023 – Present
Relevant Coursework: Data Structures and Algorithms, Operating Systems, Database Management Systems, Computer Networks, Object-Oriented Programming, System Design, Web Technologies, Software Engineering	
St. Teresa School, Indirapuram Class XII (Science, CBSE) — 89.2% Class X (CBSE) — 97.6%	Mar 2020 – May 2023

Experience

CirclePe Web Development Intern	May 2025 – June 2025
- Engineered the blog admin panel, integrated TipTap, and delivered an SEO-optimized Area Converter tool, improving usability and production readiness. - Automated ingestion of 1,000+ web data points and generated city sitemaps; architected scalable scraping pipelines and data workflows. - Prototyped UX/UI flows in Figma and React, streamlining navigation and enhancing cross-device experience. - Streamlined application performance and reliability using React.js, Next.js, and Python.	

Projects

EvokAI — Mobile App Voice Journal Backend Node.js, Express, MongoDB	Live App GitHub
- Implemented backend pipelines to ingest voice journal metadata and execute 2 scheduled asynchronous analysis workflows (daily and weekly) using the Gemini API. - Integrated Google Authentication and authorization with token verification, securing all protected API routes and isolating user-scoped journal data. - Exposed 6+ versioned REST APIs for insight generation and retrieval, applying input validation, rate limiting, and encryption/decryption to secure processing boundaries.	
SentinelWatch - Hybrid Network Intrusion Detection System (NIDS)	GitHub
- Architected a high-efficiency packet inspection module in C++ with streamlined memory paths and optimized I/O, sustaining 95% packet retention during intensive SYN-flood simulations. - Orchestrated a resilient IPC transport layer using custom buffered streams and real-time JSON serialization, delivering 100% alert throughput across peak-load network conditions. - Formulated a rule-centric detection framework backed by REST endpoints and WAL-tuned SQLite, deploying five specialized intrusion detection policies.	
Echo Chamber — AI Persona Chat App Node.js, Express, JavaScript	GitHub
- Built an AI-driven chat application using the Gemini API to deliver persona-based conversations with persistent context handling and support for 30+ concurrent requests. - Strengthened API security and improved frontend responsiveness through secure key management and adaptive light/dark UI, enhancing session stability.	

Extracurricular

Core Member, HR Team – Cisco Community, VIT Bhopal	Oct 2024 – Present
Drove member engagement by leading technical events (100+ attendees) and optimizing onboarding processes.
